## **SAR Evaluation Exemption Compliance Information**

The device has a standalone transmission.

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distances  $\leq$  50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance,mm)]·[ $\sqrt{f(GHz)}$ ]  $\leq 3.0$ 

The maximum tune-up limit power is 1.27mW @ 2.480GHz

For the head and body SAR, use 50mm as the conservative minimum test separation distance,

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance,

mm)]·[ $\sqrt{f(GHz)}$ ] = 0.040  $\leq$  3.0

So standalone SAR measurements are not required for both head and body.
